Accessories and other equipment not shown as standard items are optional.

Earle F. Moloney's name is synonymous with the creation of today's extended limousine industry. His design and manufacturing innovations have become standard in the industry. His concern about limousine safety and quality long preceded the current federal standards. When he was owner of another limousine manufacturing company, which he sold three years ago, he was the first to crash-test a Cadillac limousine against a barrier wall at 31 miles an hour in order to prove the safety of his manufacturing methods. In fact, the standards he set for both safety and quality exceed those set by the new government standards.

Under Moloney's direction and management, there were more than 11,000 extended limousines that were manufactured to his uncompromising standards.

For the past several years, Moloney has analyzed the rapidly changing needs of livery operators in vehicles that meet a totally new economic climate. The result is a new concept in both design and manufacture that is manifested in a line of extended limousines that are far more affordable than any vehicle on the market today.

Chicago Armor & Limousine Manufacturing Corporation is the new Earle Moloney enterprise in the specialty limousine manufacturing industry. The new, 70,000 square foot state-of-the-art manufacturing facility in suburban Lake Zurich, Illinois, combines the latest automation production facilities with the best of handcrafted coachbuilding talents of specialists in automotive interior and exterior craftsmanship. The entire facility was created and equipped to meet *today's* needs of extended limousines.

Staffed with designers, engineers, mechanics, production specialists and coachbuilders, **Chicago Armor & Limousine** is producing a totally new line of limousines that have been especially created to satisfy the discerning needs of corporate and consumer end users, and, at the same time, responsive to the economic requirements of the new generation of livery operators.
