HONDA R&D PROTOTYPE
MIDSHIP SPORTS

A front-facing view of a red sports car, identified as the Honda NS-X R&D prototype. The car features a sleek, aerodynamic design with a prominent front grille, headlights, and a low profile. The image is set against a dark background, highlighting the car's vibrant red color.

The pure joy of driving is the ultimate automotive experience. A driver's dream of a smooth, powerful machine for the open roads has now become a reality with the Honda NS-X.

The NS-X is a new breed of sports car that embodies both the celebrated performance of Honda's racing technology and the outstanding Honda handling that makes dynamic power all the more pleasurable. Now the everyday driver can experience the exhilaration that comes only through driving a pure sports car.

The NS-X is not a traditional, heavy sports car — a demanding beast that requires special driving skills to harness its power. Nor is it a light, sporty car designed only for a pleasant driving experience. Rather, it's a new sports machine created to provide the best of both: power and control.

In the world of pure sports machines, car and driver become one when hands touch the wheel. That driving experience is the dream of all automobile enthusiasts and the object of Honda's passionate involvement in racing. Now, the powerful technologies that emerge from Honda's racing experience have been wedded to its human-fitting automotive design to create a new concept in sports cars. The NS-X will soon arrive on the roads of the world.

Pure We've created a pure sports car for the purest of drivers.
Our car can conquer every bend and the hairiest crests of the road, achieve dramatic handling, and world-class performance.

Refined To share the joys of sports car driving with more people,
we've designed a car with the necessary grace to steer, refined control, superb stability and a smooth, comfortable ride.

Future Combining the best of both worlds with pure performance and class-unique
functional elements, we offer a new sports machine for the 1990s.
